

Author Guidelines

(This version of the Author Guidelines has been updated and is available from May 1st, 2022)

1. General Information

Aims & scope

Agrobiodiversity for Improving Nutrition, Health and Life Quality is an open access scholarly journal specializes in the issue of conservation and sustainable use of genetic resources of the traditional, forgotten, underutilized and less-known plant species. Published articles focuses on food safety, food security, biosafety, plant breeding, use of plant species for the improvement population health, ensuring the remediation of the natural resources and environment, improving the socio-economic rural development and creating the conditions for the development of regional economy and supporting the development of small and medium-sized farms.

The base platform and core of published articles is research activities covered within the international network **AgroBioNet** and institutions within this network associated. The journal is an affiliate publication of this association. The journal is an affiliate publication of this association, but accepted manuscripts that have a global relevance in terms of the topics or issues addressed and from authors without regional or institutional restrictions.

Journal is published twice a year. Periodicity change – from 2021. Articles are submitted and published without any fees (include APCs), journal is free of charge.

All articles are published under the **Creative Commons license, Attribution-NonCommercial 4.0 International (CC BY-NC 4.0 International)** and each article is assigned by DOI identifier.

Journal is indexed by the CABI Bibliographic Databases and EBSCO.

Topics

- Plant genetic resources
- Plant genetics and breeding
- Plant biotechnologies
- Traditional, forgotten, underutilized and less-known plant species
- Plants, human nutrition & health
- Plants, human nutrition & life quality

The Journal publishes research articles on ecology (biogeography, pollination biology, conservation biology, diversity, molecular ecology, phytogeography, vegetation ecology, functional ecology), ethnobotany (ethnobotany, ethnomedicine), molecular biology and genetics (genomics, proteomics, biotechnology, bioinformatics, computational biology, chromosome, genetic diversity, population genetics, cytology), physiology and biochemistry (growth & development, stress, metabolism, enzymes, proteins and natural products), reproductive biology (plant breeding, embryology, ontogeny), plant structure (morphology & anatomy, palynology, paleobotany, functional morphology, plant development), and botanical systematics (evolution, phylogeny, taxonomy, nomenclature).

Types of paper

- Original Papers
- Short Communications
- Case Studies
- Review Articles
- Letters to the Editor

For full length papers the **IMRAD** (Introduction, Methods, Results, And Discussion) structure is required.

Paper Language

Manuscripts must be written in English. Contributors who are not native English speakers are strongly advised to ensure that a colleague fluent in the English language or a professional language editor has reviewed their manuscript. Concise English without jargon should be used. Repetitive use of long sentences and passive voice should be avoided. It is strongly recommended that the text be run through computer spelling and grammar programs. Either British or American spelling is acceptable but must be consistent throughout.

The author is fully responsible for the language level of the paper.

Exceptionally, requested high-quality manuscripts may be published in a language other than English. Such a contribution must contain a Summary Plus in English, which summarizes the entire content of the article in a short form.

Open access policy and licensing information

Agrobiodiversity for Improving Nutrition, Health, and Life Quality is an open access journal available online to the readers without financial, legal, or technical barriers. Non-commercial use and distribution in any medium is permitted, provided the author and the scientific papers are properly credited.

Articles are licensed under the Creative Commons Attribution-NonCommercial 4.0 International License ([CC BY-NC 4.0 International](https://creativecommons.org/licenses/by-nc/4.0/)). Authors may re-use published data and illustrations without any restrictions other than those mandated by scientific ethical practices (credit must be given and modifications must be noted). Authors may use final published versions in e-repositories, in teaching duties, or in course packs.

Submission Process

All manuscripts are submitted via the journal publishing system only ([Submit here](#)).

After a manuscript has been submitted, it is not possible for authors to be added or removed or for the order of authors to be changed. If authors do so, their submission may be cancelled.

Editorial and peer review process

All submitted manuscripts are checked to compliance with journal guidelines and requirements. Manuscripts are managed to check for plagiarism.

Manuscript will be rejected in first evaluation if the similarity index (iThenticate result) is higher than the permitted threshold. There is no single number for the similarity percentage since each report is investigated in detail, but submissions exceeding 25% score are generally returned to authors.

The resubmission of the same title without reducing the similarity score may cause a ban of the authors from the journal. Similarity reports with more than 50 % scores, even in a single submission, may cause a ban from the journal and the authors' future submissions may not be considered for publication. Authors can check the status of their manuscript in the submission system. Authors will be notified by emails when decisions are made.

Peer review process – submissions are evaluated by 2 external reviewers in a single blind review process.

Publication ethics

Editors' responsibilities – publication decisions

The editor is responsible for the decision on which of the papers submitted to the scientific papers will be published. The editor will evaluate manuscripts irrespective of the authors' race, gender, sexual orientation, religious belief, ethnic origin, or citizenship. Decisions will be based on the papers' importance, originality and clarity, and the studies' validity and relevance to the scientific papers' scope. The editor and any editorial staff member must not disclose any information about submitted manuscripts to anyone except of corresponding authors, reviewers, potential reviewers, and the publisher, as appropriate. Unpublished materials disclosed in submitted papers will not be used by the editor or the members of the editorial board for their own research purposes without the authors' explicit written consents.

Reviewers' responsibilities – contribution to editorial decisions

The peer-reviewing process assists the editor and the editorial board in making editorial decisions and may also serve authors in improving their papers. Any manuscripts received for review must be treated as confidential documents. They must not be disclosed to or discussed with others only if authorized by the editor. Reviews should be conducted objectively. Personal criticism of authors is inappropriate. Reviewers should express their views clearly with supporting arguments. Privileged information or ideas obtained through peer reviews must be kept confidential and not used for personal advantage. Reviewers should not consider manuscripts in which they have conflicts of interest resulting from competitive, collaborative, or other relationships or connections with any of the authors, companies, or institutions associated with the papers.

2. How to...

How to prepare your manuscript (for authors)

Manuscripts must be comply with international standards/nomenclatures and best practices in force in the specific scientific fields, must be prepared with respect of international standards for the formal editing of scientific/scholarly texts and using the APA Style Guide (7th Edition). Used standards/nomenclatures must be detailed described in Material and methodology session. For plant/animal identification is using of common and/or scientific (Latin) name required.

Structure of manuscript

Manuscript text for fulltext articles should be organized as follows:

1. Title
2. Author(s)
3. Abstract & Keywords
4. Introduction
5. Material and methodology
6. Results and discussion
7. Conclusions
8. Conflict of Interests
9. Ethical Statement
10. Funding
11. Acknowledgements (if applicable)
12. References

Manuscript text for review articles should be organized as follows:

1. Title
2. Author(s)
3. Abstract & Keywords
4. Main text
5. Conclusions
6. Conflict of Interest
7. Ethical Statement
8. Funding
9. Acknowledgements (if applicable)
10. References

Abstract

The abstract should provide clear information about the research and should have 200 to 300 words and should not exceed 300 words that have to be included in the abstract text. It should include all new names, combinations, and rank transfers. It should not contain citations. Abstracts of review articles should be a brief overview of the main points from the review.

Keywords

Please provide a minimum of 3 and a maximum of 6 keywords or phrases to enable retrieval and indexing. Keywords should be written in lower case separated by a comma. Please, do not put a period at the end of the list of key words. Acronyms should be avoided. Keywords should not be a virtual copy of the title.

Acknowledgments

Purpose of this part of manuscript is to thank all who helped with the research, who provided intellectual assistance or technical support (writing, editing, material, equipment...) and help. Recommended wording: We are (I am) grateful to [Name Surname] for assistance with ... [data and other part of manuscript preparing].

Funding

Indicate number and name of the grant, according to which was the work supported. Names of funding organizations should be written in full. Recommended wording: This research was supported/partially supported by [list all institutions, companies, individuals who supported your paper] **or** This work was supported by the [institution, company] via grant/project [number and title]. In cases when no specific funding has been provided, authors use the following sentence: The author(s) received no financial support for the research, authorship, and/or publication of this article.

Style and Format

Manuscripts should be single spaced with 2-cm margins on all sides of the page, in Cambria font size 12. Manuscripts must be written in English. Either British or American spelling is acceptable but must be consistent throughout.

Symbols, Units, and Abbreviations

If symbols such as μ , η , or v are used, they should be added using the symbols menu of Word in Cambria font. Degree symbols ($^{\circ}$) must be used from the symbol menu, not superscripted letter o or number 0. Multiplication symbols must be used (\times), not the letter x. Spaces must be inserted between numbers and units (e.g., 3 kg), between numbers and mathematical symbols ($+$, $-$, \times , $=$, $<$, $>$), between numbers and percent symbols (e.g., 45%). Please use SI units. All abbreviations and acronyms should be defined at first mention.

Tables and Figures

All illustrations (photographs, drawings, graphs, etc.), not including tables, must be labeled "Figure." All tables and figures must have a caption and/or legend and be numbered (e.g., Table 1, Figure 2). The font used in the figures should be Cambria. If symbols such as \times , μ , η , or v are used, they should be added using the symbols menu of Word in Cambria font. All tables and figures, including subfigures, must be numbered consecutively as they are referred to in the text; e.g., Figures 2a, 2b, and 2c should be referred to in the text in that order before Figure 3. Please, refer to tables and figures with capitalization and unabbreviated (e.g., "As shown in Figure 2...", and not "Fig. 2" or "figure 2").

Figure must be in an editable vector format, which allows us to make necessary grammar corrections (please, insert full MS Excel sheet). Scanned or photocopied graphs and diagrams are not accepted.

For all tables, please use Word's "Create Table" feature, with no tabbed text or tables created with spaces and drawn lines. Please do not duplicate information that is already presented in the figures.

All re-used tables and figures (or data) must be in text correct identified and referred.

See the Article Template for more details on preparing the manuscript: [Article Template](#)

Incorrect and correct forms of symbols, units, and abbreviations: [Annex 1](#) (final page of guidelines).

References

The Agrobiodiversity for Improving Nutrition, Health and Life Quality using Harvard citation format (authorship with date) and APA referencing style (<https://apastyle.apa.org/style-grammar-guidelines/references/examples>).

References in text

In-text references are references written within the main body of text and refer to a quote or paraphrase.

References should be cited in the text by the last name(s) of the author(s) and year of publication with a comma between them: for example, (Vergun, 2005) or (Vergun and Ivannikov, 2005). If the citation is the subject of the sentence, only the date should be given in parentheses: "According to Vergun (2005)..." or "According to Vergun et al. (2010)..." or "According to Vergun and Klymenko (2019)..." For citation of references with 3 or more authors, only the first author's name followed by et al. (not italicized) should be used: (Klymenko et al., 2002). If there is more than one reference in the same year for the same author, please add the letters a, b, etc. to the year: (Klymenko et al., 1998a, b). References should be listed in the text chronologically, separated by semicolons, and references published in the same year should be further ordered alphabetically: (Klymenko et al., 1987; Ivannikov, 1987; Vergun et al., 2000; Grygorieva et al., 2004a, b). If the author of a reference is an organization or corporation, use its name in the reference list (using an abbreviation in the citation, if appropriate); do not use "Anonymous".

Reference list (References)

Reference list is arranged in alphabetical order by authorship with date (Harvard citation format).

If the source document (primary source) was published in a non-Roman (Latin) script (for example in Cyrillic script), the author must for conversion use the required romanization system/standard to refer of the source: <http://www.eki.ee/wgrs/>.

Do not include personal communications or unpublished data or materials (such as project final reports, websites, computer programs, poster papers, presentations, and manuscripts that are not published yet) as references. Do not include personal communications or unpublished data or materials (such as project final reports, websites, computer programs, poster papers, presentations, and manuscripts that are not published yet) as references. However, these materials may be inserted as a footnote in the main text.

How to submit you manuscript (for authors)

All manuscripts must be submitted via the journal publishing system only: ([Submit here](#)), or here: <https://agrobiodiversity.uniag.sk/scientificpapers/about/submissions>.

The submission process has three base phases – registration/login, metadata insert, manuscript/ file insert.

Login: <https://agrobiodiversity.uniag.sk/index/login>

Registration: <https://agrobiodiversity.uniag.sk/index/user/register>

As part of the submission process, authors are required to check off their submission's compliance with all of the following items, and submissions may be returned to authors that do not adhere to these guidelines.

- The submission has not been previously published, nor is it before another publication for consideration (or an explanation has been provided in Comments to the Editor).
- Where available, URLs for the references have been provided.
- The text adheres to the stylistic and bibliographic requirements outlined in the Author Guidelines.

How to process a review of a received manuscript (for reviewers)

The review process (include communication with authors) takes place in the online publishing system and has three principal phases – acceptance of manuscript for review, review and review report.

Login: <https://agrobiodiversity.uniag.sk/index/login>

Registration: <https://agrobiodiversity.uniag.sk/index/user/register>

Each reviewer must register and log in to the system and result of the evaluation will be communicated within the system, too. If necessary, contact the executive editor/editor-in-chief directly in the system, or by e-mail (olgrygorieva@gmail.com).

3. How to contact us (for all)

General e-mail contact to the Journal editorial office: agrobiodiversity@uniag.sk
